

## TestoRx™ Ingredients:

### (Androgenic – Anabolic Testosterone Proprietary Matrix)

**Bulgarian Tribulus**—contains alkaloids, steroidal saponins, and flavonoids. It is believed that the protodioscins content is responsible for its positive effects on libido, hormone, and body composition. Clinical research suggests that Tribulus Terrestris may support healthy blood pressure, libido, and healthy cholesterol profiles already in normal range.\* Tribulus terrestris stimulates the increase of luteinizing hormone (LH), which boosts testosterone levels. The natural result of increased LH levels is the increased production of testosterone.

**Testofen**®—is a patented extract of fenugreek, is designed to stimulate the body's own production of Androgens to increase muscles, strength and sex drive! Testofen stimulates the Adrenal cortex which in turn causes the release of the body's own muscle building factory, androgens! One of the most common androgens produced is Androstenedione. In clinical studies, Testofen has been shown to boost testosterone levels by 98%.

**ZMA**®—is a patented all-natural scientifically designed anabolic mineral formula containing Zinc Monomethionine Aspartate, Magnesium Aspartate and vitamin B-6. Clinical testing suggests ZMA significantly increases free testosterone levels, total testosterone, IGF-1, muscle strength and anabolic hormone levels.\*

**Tongkat Ali**—also referred to as Longjack, this herb stimulates the production of endogenous testosterone which reduces the levels of bound and metabolically inactive testosterone in the body.\* It is believed that this is achieved through the Leutinizing Hormone (LH) pathway. Longjacks ability to protect and boost immunity and testosterone, reduce body fat levels and enhance muscle tone and strength will benefit athletes looking to improve their performance.

**Velvet Bean**—is an amino acid formed in the liver and converted into dopamine in the brain. It contains L-Dopa (L-3, 4-dihydroxyphenylalanine) and is essential for integrated movement of individual muscle groups.

**DHEA**—(dehydroepiandrosterone) serves as precursor to male and female sex hormones. DHEA is an endogenous hormone (made in the human body) and secreted by the adrenal gland.

**Damiana**—has historically been used to relieve anxiety, nervousness, and mild depression, especially if these symptoms have a sexual component. It has long been used as an aphrodisiac in South American cultures.

**Muira Puama**—is traditionally used as a sexual tonic and an aphrodisiac to treat impotence and promote virility. In an effort to enhance sexual desire, natives sometimes drink a muira puama beverage before planned lovemaking. Muira puama is also an herb traditionally used to treat nervous exhaustion and depression.

**Epimedium**—also known as Horny Goat Weed contains a variety of valuable flavonoids, polysaccharides, sterols and alkaloids and functions as an aphrodisiac. Some studies have suggested that Horny Goat Weed may increase testosterone, resulting in increased sex drive and energy.

### (Anti-Aromatase/Estrogen Inhibitor Complex)

**Chrysin**—is natural occurring flavones. Clinical studies suggest that after supplementing with chrysin blood serum levels of testosterone went up. Chrysin works by reducing aromatization or the conversion of testosterone into estrogen, therefore boosting natural testosterone levels.

**DIM**—(diindolylmethane) is derived from indole-3-carbinol. Scientific research suggests this increases the level of "good" estrogens (2-hydroxyestrogen) while reducing the level of "bad" estrogens (16-hydroxyestrogen). This results in metabolites that help release testosterone from its binding proteins for increased testosterone activity.

**Diadzein**—is part of the isoflavone class of flavonoids and is also classified as a phytoestrogen since it is a plant-derived nonsteroidal compound containing estrogen-like biological activity. Daidzein is known to have anti-estrogenic effects.

### (Bio-Enhancer Blend)

**Bioperine**®—is a patented standardized extract from the fruit of Piper nigrum L (black pepper) or Piper longum L (long pepper). It increases blood supply to the GI tract, which enhances nutrient absorption.

**Cayenne**—Clinical and anecdotal evidence strongly suggests that cayenne pepper can be utilized to carry other substances, such as herbs and other nutrients into the bloodstream. It also has the ability to rapidly stimulate the circulatory system and bring fresh blood, oxygen and nutrients to the heart and other organs in the body.

Testofen® is a registered trademark of Gencor Pacific Inc.  
ZMA® is a registered trademark of SNAC Systems, Inc.  
Bioperine® is a registered trademark of Sabinsa Corp.

## What is Testosterone?

Testosterone belongs to a class of hormones called androgens. These are male hormones responsible for the development of the male reproductive system and secondary male sexual characteristics such as voice depth and facial hair. Testosterone is normally produced by the testes in large quantities in men. It also occurs normally in smaller quantities in women.

Testosterone is considered an “anabolic” or “growing” hormone. That means that it helps support your body’s ability to repair itself and stay healthy and active. Recent studies showed that men with low testosterone levels had higher levels of abdominal fat, overall body fat, and insulin in their bloodstream. Unfortunately, most men will develop testosterone deficiencies as they get older. As testosterone levels decrease with aging, specific symptoms and changes in body systems occur.

## Effects of Low Testosterone Include:

- Lack of Energy
- Loss of Muscle
- Strength Reduction
- Halted muscle Growth
- Poor Immune Function
- Depression
- Obesity

## Scientifically Proven Ingredients

Pharmaceutical Alternatives, LLC is devoted to manufacturing safe effective natural alternatives to prescription drugs.\* We use the latest research, technology, and the purest ingredients to provide our customers with the best nutritional products on the market today. Proven Ingredients = Guaranteed Results

**TestoRx™**  
WITH TESTOFEN™, ZMA®, & TRIBULIS

## #1 Testosterone Booster

- Increase testosterone levels
- Increase strength & lean body mass
- Boost energy & recovery
- Increase sex drive
- Side effect free

## TAKE YOUR WORKOUT TO THE NEXT LEVEL

*This is the best testosterone booster I have ever taken.*

*My bench went up 60 lbs in 1 month while on TestoRx!*

*I couldn't be happier."*

*—Steven, age 26,  
Long Island, NY*

*"TestoRx is one of the best test boosters on the market. It makes me feel better, I have more energy, and I have put on more lean body mass since taking this product."*

*—M. Shewell, age 51,  
Salt Lake City, UT*

### Tired of all the HYPE and products that don't work?

Then take your workout to the next level and experience the next Generation of Supplementation with TestoRx™.

TestoRx contains clinically proven ingredients to give you the results you are looking for. Guaranteed! TestoRx contains patented ingredients like Testofen™, ZMA®, Bulgarian Tribulis, and other Androgenic-Anabolic-Testosterone proprietary ingredients to help you excel at the gym and in the bedroom. TestoRx is the only product of its kind to include an Androgenic-Anabolic-Testosterone Proprietary Matrix as well as Anti-Aromatase/Estrogen Inhibitors and Bio Enhancers for added absorption. TestoRx is all-natural, side effect free, and will not cause kidney or liver damage like some harmful testosterone boosters on the market.
